We Deliver!

Ready for Dispatch to Your Facility

Revinu has the capability to deliver equipment, set it up, and train personnel on operations, or we can operate it for you. The choice is yours.

Short term rental or long term leases are available both with or without hauling and distribution of end product.

Biosolids Management

Revinu, Inc. has formed a specialized team to provide the best service possible for most biosolids management projects

We have successfully provided operations, including the distribution of millions of wet tons of Class A/AA material, Class B land application, dewatering, transportation and marketing services, to multiple municipalities. Our philosophy is to provide services that will not only benefit our communities but society as a whole.

Revinu, Inc. owns equipment utilizing the Schwing Bioset process to produce Class A/AA biosolids and offers mobile services for this technology. Additionally, Revinu, Inc. owns and operates equipment that dewateres liquid biosolids. This dewatered product can then either be further processed to a Class B or Class A/AA product, or be hauled away and safely distributed and re-purposed.

Revinu's approach is proven and successful as demonstrated by our history, which includes 25+ years of biosolids hauling and disposal, Class A/AA production, mobile dewatering, mobile Class A/AA operations, land management, soil enhancement, fertilizer sales, and equipment leasing.

Our team of experts is unique and it includes Beneficial Reuse Consultants, Product Managers, Project Managers, Permitting Specialists, Environmental Specialists, Mechanics, Haulers, and Operations Personnel.
